
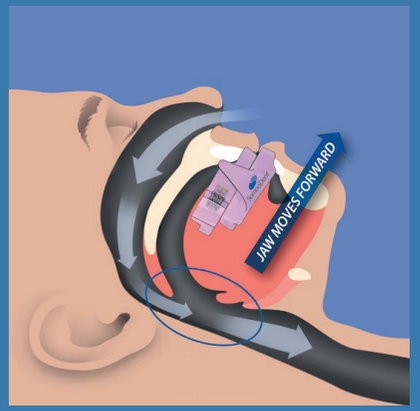
SomnoDent® is a mandibular advancement device (MAD) created on the basis of the patient's bite registration and consists of upper and lower dental plates.

The b-flex Comfort lining maximizes patient comfort. The resulting high levels of patient satisfaction and acceptance contribute substantially to the therapeutic success of the treatment.



The patented mechanism gently moves the lower jaw into the desired therapeutic position and keeps the airway open during sleeping

SomnoMed®

SOMNOMED'S INNOVATIVE PRODUCT RANGE

www.somnomed.com

The SomnoDent® range of products by SomnoMed, offer a comfortable and innovative alternative to CPAP for the treatment of Obstructive Sleep Apnoea.

SomnoDent® devices are clinically proven, supported by medical evidence, innovative in design and are recommended for the treatment of mild to moderate OSA and for patients that are intolerant of other therapy options.

Patients worldwide are being successfully treated with SomnoDent® devices, allowing them to sleep more restfully and return to enjoying their lives.

Intraoral Scanning

Scan and cloud-send patient's digital impression and protrusive bite directly

No messy or costly impression materials

More comfortable for patients - no gagging

Faster product turnaround time

Ensures precision and predictability in production

SomnoDent Features:

More Comfortable: SomnoDent devices are custom fitted and more comfortable for patients which makes the therapy efficient due to its high tolerance/compliance.

High Quality: We use the highest quality acrylic which won't discolour, and offer a 2 year warranty on our devices. (see website for details).

Clinically Proven: SomnoMed stands by our quality promise by manufacturing devices that are proven and validated by more than 17 clinical studies.

Device Selection: We offer a wide range of sleep apnoea devices for different patients needs.

Patient Awareness: We inform patients about OSA solutions.

Compliance: Customers rate SomnoDent products as a 4 on a scale of 1-5.

Practice Support: Our sales team is actively connecting sleep dentists with sleep physicians, increasing referrals.

Technical Support: Experienced Lab and Customer Service staff for all technical and product choice enquiries.

Marketing Support: Patient Materials, website & advertising support.

SomnoDent® AVANT

SomnoDent Avant is digitally designed for dentists who want a slim, durable device with a quality fit and finish. Our CAD-CAM manufacturing system ensures a precise and consistent fit. With an innovative titration system and our proprietary b-flex comfort liner, the Avant is our slimmest most comfortable device, particularly suitable for a patient with a narrow arch.

Durable SomnoDent Avant Advancement Straps provide simple calibration in 1mm increments

- An initial set of 10X straps provided with your case with additional sizes available in small, medium, large (10x per set) to cover every patient's complete advancement range
- Completely digital process produces a precisely fit device with exceptional strength
- Backed by SomnoMed's dependable 2-year warranty

SomnoDent® FLEX

For the ultimate in comfort and flexibility, Flex offers the standard in a comfortable oral device with a patented soft inner SMH BFlex liner that is heat cured that faciliates bonding between layers and a reliable titration system.

Provides a comfortable "first time fit" for patients with minimal adjustment needed.

Superior device retention even for patients with short teeth, little undercut or crown, bridge work.

SomnoDent® FUSION

For the ultimate innovative comfort and flexibility, a longer titration range and fast titration Fusion offers premium comfort and convenience.

Combination of a removable wing system for quick titration and the basic fine calibration screw technology.

Usable in an instant and with b-flex Comfort Liner for a consistent retention and quality.

SomnoDent® EDENTULOUS

Solution for partial and complete edentulous.

The b-flex Comfort Liner covers the full maxillary palate and is retained by posterior palatal seal.

Occludes with a lower splint using a two piece coupling mechanism.

Range of motion is preserved without jeopardizing the retention of the upper splint with a downward pull.

A minimum of 4 - 5 teeth or 2 implants in the lower arch are necessary.

Morning Repositioner

Hands-free bite trainer.

Provides a patient-specific, comfortable and compressible raised splint that directs clenching forces straight down.

Uniquely designed for patients to perform isometric exercises that should minimize the possibility of mandibular positioning forward.

SomGauge

For quickly and easily capturing the most accurate bite registration, SomGauge is the first gauge of its kind to allow for an increased measurement of the vertical along with an adjustable ramp.

Provides amplified impression accuracy and device integrity and comfort for the patient.

SomTabs

For gentle and effective cleaning of SomnoDent devices without harming the appliance or producing a bad after taste.

Exclusively manufactured for SomnoDent devices. Does not contain Sodium Perborate.
